

1.) Login to <https://jupyterlab.uvt.nl> and open a terminal

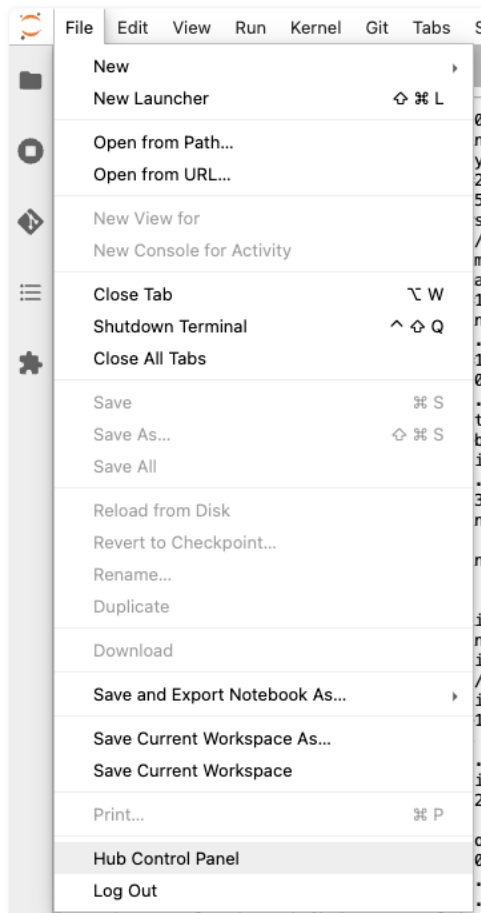

2.) Run both commands below

```
pip install --user --no-cache-dir notebook 'marimo>=0.6.21' jupyter-marimo-  
proxy
```

```
printf '[DEFAULT]\npath = ~/.local/bin:~/bin:$PATH\n' > ~/.jupytermarimoproxyrc
```

3.) Stop your running server (File → Hub Control Panel → Stop my server)

Stop My Server

My Server

4.) Start your server

Start My Server

You should now be able to launch Marimo, note that it can take a little while for marimo to launch.

 Notebook
